Gorilla manufactures the highest quality products available, representing outstanding value across a broad range of applications.

Gorilla ladders are manufactured in the largest ladder manufacturing plant in the world, to Australian & New Zealand Standards. All Gorilla research and development is conducted in Australia, with designs tested and modified in Australia & New Zealand.

Gorilla manufactures a range of patented products, including the Gorilla Stabiliser and Gorilla Brace which can increase ladder safety. Unique products such as the telescoping aluminium plank and Gorilla Bumpers are all part of the dynamic range that Gorilla is proud to bring to market.
**Product Features**

**Top Cap Organiser**
On Aluminium and Industrial Fibreglass single sided ladders.

**Anti-Slip Treads**
Minimises slipping. Featured on all Gorilla ladder designs.

**Resin Bracing System**
Patented resin brace on Industrial 150kg models 1.8m (6ft) and over (excludes extension ladders).

**Roll Locked D-Shaped Rungs**
Featured on Industrial extension ladders for added strength and durability.

**Stabiliser Mounting**
Factory produced mounting holes allow for easy fitting of stabiliser. Mounting holes on most Gorilla ladders 1.8m and over.

**Internal Spreader**
Packs away to prevent fouling.

**Non-Slip Heavy Duty Platform**
Large non-slip platform surface for added safety when working at heights. Platform featured on Gorilla platform ladders.

**Handrail**
Heavy duty aluminium handrail fitted to all Gorilla platform ladders (positioned 900mm from platform). Accessories available.

**Aluminium or Fibreglass?**

As a general rule, fibreglass ladders are recommended and in most cases mandatory when working in an electrical environment. A fibreglass ladder provides isolation between the user and earth, reducing (but not eliminating) the risk of electrocution.

Aluminium ladders provide little electrical isolation for users, and are therefore not recommended for use in electrical environments.

Aluminium ladders are lighter than fibreglass, and are perfect for use in all non-electrical environments.

Safe use of your ladder

**ALWAYS** inspect your ladder for damage prior to use – **DO NOT** use any ladder which is damaged.

**ALWAYS** be aware of your environment before setting up – check for hazards such as power cables, moving vehicles and doors.

**ALWAYS** wear appropriate, fully-enclosed footwear.

**ALWAYS** face the ladder when ascending/descending.

**ALWAYS** read ALL instructions present on ladder before use.

**NEVER** leave your ladder unattended – children may ascend and fall.

**Step Ladders**

**ALWAYS** use in the fully open position, with spreader mechanisms engaged.

**NEVER** stand on the top step.

**ALWAYS** keep body centred within the stiles of the ladder.

**ALWAYS** ensure ladder is positioned with all feet in contact with the ground and the surface is firm and level.

**Extension Ladders**

**ALWAYS** extend top of ladder >1.0m beyond the top support point.

**ALWAYS** lean your ladder at an angle of 1:4 – for each 4m your ladder is extended, it should be 1.0m out from the top support point.

**ALWAYS** ensure that the ladder feet and top support point are secure and cannot slip.

**Accessories**

**ALWAYS** read and follow usage directions.

**Fibreglass Care**

Over time and with use, fibreglass may deteriorate to a point where fibres come loose. This issue can be addressed by applying a coating of polyurethane or acrylic lacquer over loose fibres.

Scaffold

The Gorilla Expanda Scaff has been specially designed by one of Australia’s leading scaffolding companies (No Bolt) to incorporate strength, durability and most importantly flexibility. The Expanda Scaff incorporates a unique design that allows you to expand up and out by adding additional free standing core packs, making it incredibly versatile.

Material: Aluminium
225kg per width of scaffold

Core Pack Code: GS-01
Contents: 4 x Horizontals, 1 x Diagonal Brace, 2 x End Frames, 1 x Trapdoor Tray & 4 x 150mm (6”) Locking Castors.

Height:
Number of core packs  1  1  1
Number of riser packs  0  1  2
Safe Platform Height  0.9m  2.1m  3.7m
Working Height  2.4-2.7m  3.6-3.9m  5.2-5.5m

Working heights are generally measured in front of user in the space between their chest and shoulders. These heights are intended as a guide only as the height of the user will greatly vary these measurements.
